May 11, 2011

1                                   **Direct Rebuttal Testimony of Michael E. Boyd**  
2                                   **On behalf of CALifornians for Renewable Energy, Inc. (CARE)**

3  
4 My name is Michael E. Boyd and I reside and maintain an office for CALifornians  
5 for Renewable Energy, Inc. (CARE) at 5439 Soquel Drive, Soquel, California.

6  
7 I am the President of the Board of Directors of Californians for Renewable  
8 Energy, Inc. (CARE), I have a Bachelors in Science in Physics from UCSB in  
9 1985 and I have worked for over 20 years as an engineer and scientist in the  
10 energy, medical device, microelectronics, telecommunication, semi-conductor,  
11 and hard drive industries. I am also an inventor. I recently filed a Provisional  
12 Patent with the USPTO on an apparatus that produces energy from gravity  
13 induction produced by a spinning disk. A summary of my Patent Pending US  
14 61/465,823 is shown at the link provided herein.<sup>1</sup>

15  
16 I have attached a copy of my resume [attach 1] and a proof of patent pending  
17 [attach 2] on the mass spin valve a device that produces energy from the presence  
18 or absence of matter on a spinning disk.

19  
20 The purpose is to rebut the direct testimony of Pacific Gas and Electric Company  
21 (PG&E), Southern California Edison Company (“SCE”), San Diego Gas and  
22 Electric Company (“SDG&E”), and support the direct testimony of DRA, Pacific  
23 Environment, Women’s Energy Matters (“WEM”), Communities for a Better  
24 Environment (“CBE”) that the IOU Plans Are Not Adequately Addressing the  
25 Loading Order and GHG Emissions Reductions.

---

<sup>1</sup> <http://www.calfree.com/DescriptionMassSpinValvepatentsummary+figures.pdf>

1 **I. INTRODUCTION**

2 As a general matter I agree with DRA, Pacific Environment, Women’s  
3 Energy Matters (“WEM”), Communities for a Better Environment (“CBE”) that  
4 the IOU Plans Are Not Adequately Addressing the Loading Order and GHG  
5 Emissions Reductions; while I agree with DRA that The IOU Hedging Plans  
6 Require Modifications I question the lawfulness and adequacy of this  
7 Commission’s authority in this field; which is currently held by the Commodities  
8 Futures Trading Commission.  
9

10 **II. IOU PLANS ARE NOT ADEQUATELY ADDRESSING THE**  
11 **LOADING ORDER**

12 In the last two rounds of procurement the Commissions directives to  
13 procure preferred resources have not been followed. The utilities all chose to fill  
14 their net short positions with natural gas fired generation. In this round of  
15 procurement it is essential that the Commissions polices favoring energy  
16 efficiency and renewable generation be enforced.

17 I agree with DRA, PE, WEM, and CBE that energy efficiency coupled with  
18 distributed generation (“DG”) and demand response programs are first on the  
19 loading order but last on the list for long term procurement funding mechanisms.  
20 PE’s witness Bill Powers PE correctly points to an example of where the focusing  
21 of long term procurement funding mechanisms on energy efficiency can achieve  
22 cost savings that benefit both customers and their incumbent utility. “PG&E  
23 estimates that approximately 1.6 million of its nearly 4.5 million residential  
24 customers are equipped with central air conditioning. Mature utility air  
25 conditioning cycling programs in other jurisdictions have achieved market  
26 penetration of up to 25 percent. This penetration rate results in approximately 300  
27 MW of load reduction from an air conditioning cycling program in PG&E

1 territory.<sup>[2]</sup> *Air conditioner cycling is an important tool for reducing peak*  
2 *demand*, and should be maximized by integrating this cycling capability into new  
3 air conditioners as a standard feature.” [Powers par. 2 p. 17] WEM’s testimony  
4 likewise states “Examples of energy efficiency that can dramatically reduce peak  
5 load are more efficient air conditioning; “recommissioning” of HVAC, which  
6 ensures that air conditioners are properly charged and maintained; “shell”  
7 measures such as insulation that tighten up the outer “shell” of a building; white  
8 roofs that reflect the sun’s heat rather than absorbing it; and planting shade trees to  
9 shield the south and west sides of buildings against the summer sun. All of these  
10 measures serve to reduce load from air conditioning, which is forty percent of  
11 peak load in California.” [WEM par 3 p. 16] Oddly this is the very information  
12 PG&E seeks to strike?

13 WEM also raises two additional issues that appear to be highly relevant.  
14 The “tariff that sets metering and operating standards for self-generation facilities  
15 interconnected to the utility distribution system, Rule 21, issues must be  
16 incorporated in the long-term procurement plans” [WEM par 7 p. 13] to be  
17 consistent that energy efficiency coupled with distributed generation (“DG”) and  
18 demand response programs are first on the loading order. Addressing Rule 21  
19 therefore is clearly important to making these measures first [not last] on the list  
20 for long term procurement funding mechanisms. Importantly I agree with WEM  
21 “[i]t is incumbent on the Commission to begin preparing for a shutdown of Diablo  
22 Canyon and San Onofre nuclear reactors in either case. Both reactors sit on and  
23 near multiple faults capable of major earthquakes; both sit on oceanfront real  
24 estate where tsunamis are a possibility. The earth’s tectonic plates can heave at  
25 any moment, without warning.” [WEM par 4 p. 8] While I agree it is unlikely, the  
26 LTPP must analyze the possibility that these nuclear facilities will no longer be

<sup>2</sup> PG&E, *2006 Long-Term Procurement Plan, Order Instituting Rulemaking to Integrate Procurement Policies and Consider Long-Term Procurement Plans - Volume I*, Public Version Redacted, December 11, 2006. p. IV-16.

1 allowed to continue operating due to a change in the regulatory and insurance risk  
2 constraints facing the nuclear power industry.

3 I would like to point out however that CARE has an outstanding Motion to  
4 Dismiss<sup>3</sup> PG&E’s Diablo Canyon Re-licensing Application 10-01-022.<sup>4</sup>

5  
6 **III. IOU Plans Are Not Adequately Addressing GHG Emissions**  
7 **Reductions**

8 Assembly Bill (AB) 57, enacted in 2002 and codified at Public Utilities  
9 Code section 454.5 (as later amended), the Energy Action Plan II issued in 2005  
10 (EAP II), and AB 32, the Global Warming Solutions Act of 2006, are at the core  
11 of California’s energy policy to transition to a more sustainable, clean energy  
12 future. AB 57 established California’s Renewable Portfolio Standard (among other  
13 important provisions governing electric procurement by the IOUs). In 2005,  
14 section 454.5 was amended to prioritize energy efficiency and demand response,  
15 as well as renewable energy resources in long-term procurement planning.

16 Consistent with these requirements, the EAP II reinforced a “loading order”  
17 for the state’s energy sector to follow in implementing energy procurement in  
18 accordance with California’s environmental policies. AB 32 directed the  
19 California Air Resources Board (CARB) to develop a Scoping Plan for how the  
20 state will achieve the GHG reductions required to reach 1990 levels by 2020. The  
21 Scoping Plan calls upon the energy sector to contribute a significant portion of the  
22 State targeted GHG emissions reductions.

23 I agree with DRA that “The programs and initiatives that have been  
24 established to meet the state mandates and Commission directives for renewable  
25 and other preferred resource procurement are documented in each IOU’s bundled  
26 procurement plan. However, it is not completely clear or apparent that once the  
27 state mandates are met, the IOUs are giving appropriate consideration to resources  
28 in the loading order to fill their net short positions. It is also not apparent that the

<sup>3</sup> <http://docs.cpuc.ca.gov/EFILE/MOTION/133659.htm>

<sup>4</sup> <http://docs.cpuc.ca.gov/published/proceedings/A1001022.htm>

1 IOUs are transparently demonstrating how each procurement decision complies  
2 with the State’s GHG reduction goals and how each application for fossil  
3 generation comports with the loading order and GHG reduction goals.” [DRA  
4 lines 9 to 17 p. 14]

5 As PG&E correctly states in its testimony “[i]n 2006, the California  
6 Legislature enacted legislation intended to reduce California greenhouse gas  
7 (“GHG”) emissions commonly referred to as “Assembly Bill 32” or “AB 32.” A  
8 significant portion of the targeted GHG emissions reductions will likely come  
9 from the energy sector of the California economy.” [PG&E Exh. 2 p. 10]

10 PG&E’s testimony is erroneous tht “Energy Policy, Planning & Analysis,  
11 The EPPA department strives to meet the EP organization objectives through  
12 electric and gas resource planning that integrates demand-side and supply-side  
13 resource alternatives, and transmission and generation alternatives. EPPA analyzes  
14 regional supply-demand balances, the composition of potential PG&E portfolios,  
15 and the value of incremental resources to PG&E customers and regional supply.  
16 EPPA performs these analyses using financial, economic, and engineering  
17 methodologies and tools. EPPA analyzes current and potential market structures  
18 and policy initiatives, such as the EAP Loading Order, *cap-and-trade for GHG*  
19 *emission reductions*, and considers how these developments impact PG&E’s  
20 procurement.”[PG&E Exh. 2 p. 12] Since on March 17, 2011 the San Francisco  
21 Superior Court issued its Decision<sup>5</sup> in Case No. CPF-09-509562; the Court’s  
22 Decision is attached as a separate Attachment A. A San Francisco Superior Court  
23 judge ruled that the California Air Resources Board failed to properly evaluate  
24 alternatives to the so-called *cap-and-trade program*, which would allow industries  
25 to purchase pollution allowances rather than cut their own carbon emissions.

<sup>5</sup><http://cdn.law.ucla.edu/SiteCollectionDocuments/Environmental%20Law/Court%27s%20Final%20Order%203%2017%2011.pdf>

ARB attempts to avoid CEQA's mandates by referring to the process under which a decision is actually made as "adoption" rather than "approval." This is an empty distinction given that the implementation has commenced. ARB was unable to make an informed decision at the time it adopted Resolution 08-47 because it had not yet reviewed and responded to public comments. Accordingly, any efforts to approve the Scoping Plan and implement its proposed measures prior to completing the environmental review process were violations of both CEQA and ARB's own certified regulatory program.

13  
14  
15  
16  
17  
18

The court said that measures such as a carbon tax or direct regulation of greenhouse gases were not given enough consideration and therefore, Continued rulemaking and implementation of cap and trade will render consideration of alternatives a nullity as a mature cap and trade program would be in place well advanced from the premature implementation which has already taken place. In order to ensure that ARB adequately considers alternatives to the Scoping Plan and exposes its analysis to public scrutiny prior to implementing the measures contained therein, the Court must enjoin any further rulemaking until ARB amends the FED in accordance with this decision.

The judge's decision criticized the air board for giving short shrift to a carbon fee or tax, devoting a "scant two paragraphs to this important alternative" to a market-based trading system in its December 2008 plan calling cap and trade and it said the board had failed to consider public comments on its broad greenhouse gas plan before its adoption.

It is my testimony therefore that because the California Environmental Quality Act ("CEQA") Environmental Impact Report ("EIR") carried out by the California Air Resources Board (CARB) on the state's Scoping Plan for implementation of California's greenhouse gas statute AB 32 adopted on the December 11, 2008 lacks any lawful basis to authorize the IOU's RPS Procurement Plans, and based on the fact that the Court has "enjoined" the state from "further rulemaking" in this regard

**IV. The IOU Hedging Plans Require Modifications**

1 I question the lawfulness and adequacy of this Commission's authority in  
2 this field; which is currently held by the Commodities Futures Trading  
3 Commission ("CFTC"). It is my testimony that the broad purposes and intent of  
4 the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-  
5 Frank")<sup>6</sup> are served by applying the new regulatory paradigm to hedging  
6 transactions of the investor owned utilities ("IOUs").

7 Prior to the enactment of Dodd-Frank, energy commodity derivatives were  
8 broadly exempt from regulation by the Commission under the Commodity  
9 Exchange Act ("CEA").<sup>7</sup> For IOUs, the regulatory paradigm for hedging programs  
10 prior to Dodd-Frank consisted of the review and oversight of such programs by  
11 our state and federal prudential regulators, the CPUC and the FERC. There are  
12 many indications that the use of swaps to hedge or mitigate commercial risks by  
13 IOUs was related to the types of systemic risk that caused the financial crisis.

14 It is my testimony that a "bottomless pit" of unsecured debt opened up  
15 worldwide when the Congress allowed unregulated banks to be created in 2000 in  
16 the Enron loophole. The "Enron loophole" exempted most over-the-counter energy  
17 trades and trading on electronic energy commodity markets from government  
18 regulation.<sup>8</sup> The "loophole" is so-called as it was drafted by Enron Corporation  
19 lobbyists working with U.S. Senator Phil Gramm (R-TX) to create a deregulated  
20 market for their experimental "Enron On-line" initiative.<sup>9</sup> The "loophole" was  
21 enacted in sections § 2(h)(3) and (g) of the Commodity Exchange Act, 7 U.S.C. as  
22 a result of the Commodity Futures Modernization Act of 2000, signed by U.S.  
23 president Bill Clinton on December 21, 2000. It allowed for the creation, for U.S.  
24 exchanges, of a new kind of derivative security, the single-stock future, which had

<sup>7</sup> See CFTC's Policy Statement Concerning Swap Transactions, 54 Fed. Reg. 30694 (July 21, 1989); Exemption for Certain Contracts Involving Energy Products (58 Fed. Reg. 21286 (April 20, 1993); Exemption for Bilateral Transactions, 17 C.F.R. Part 35.

<sup>8</sup> Jickling, Mark (2008-07-07). "The Enron Loophole". Congressional Research Service.

[http://assets.opencrs.com/rpts/RS22912\\_20080707.pdf](http://assets.opencrs.com/rpts/RS22912_20080707.pdf)

<sup>9</sup> Mother Jones, <http://www.motherjones.com/politics/2008/05/foreclosure-phil>

1 been prohibited since 1982 under the Shad-Johnson Accord, a jurisdictional pact  
2 between John S. R. Shad, then chairman of the U.S. Securities and Exchange  
3 Commission, and Phil Johnson, then chairman of the Commodity Futures Trading  
4 Commission. On June 22, 2008, then U.S. Senator Barack Obama proposed the  
5 repeal of the "Enron loophole" as a means to curb speculation on skyrocketing oil  
6 prices.<sup>10</sup> In the first half of 2008 the notional amounts outstanding of over-the-  
7 counter (OTC) derivatives continued to expand. Notional amounts of all types of  
8 OTC contracts stood at \$683.7 trillion at the end of June 2008.<sup>11</sup>

9 As indicated in both of the NOPR referenced above, the 111th United  
10 States Congress enacted Dodd-Frank explicitly to: (i) reduce systemic risk, (ii)  
11 increase transparency, and (iii) promote market integrity.<sup>12</sup> It is my testimony as  
12 described below, that the broad purposes of Congress in enacting Dodd-Frank,  
13 would be served by requiring IOUs and other utilities to comply with the new  
14 regulatory paradigm enacted as part of Dodd-Frank in addition to the current state  
15 and federal regulation and supervision by the CPUC and the FERC. Indeed, there  
16 are public interest considerations supporting the CFTC's exercise of its broad  
17 powers in favor of IOU customers and customers of similarly situated regulated  
18 public utilities.

19 Where swap transactions are required or approved (or both) by our  
20 prudential regulators, IOU should be subject to CFTC's oversight and should have  
21 to rely on the definitions of "swap," "swap dealer," and "major swap participant."  
22 Furthermore, IOUs shouldn't be permitted to be exempt from any reporting  
23 requirements under Dodd-Frank<sup>13</sup> by submitting copies of the reports that were  
24 prepared and submitted to the CPUC and the FERC.

<sup>12</sup> 75 Fed Reg. 80174 and 75 Fed. Reg. 80747 ("The Dodd-Frank Act was enacted to reduce risk, increase transparency, and promote market integrity within the financial system . . .").

<sup>13</sup> See Dodd-Frank §§ 727 and 729 as well as the NOPRs published by the Commission at 75 Fed. Reg. 78892 (Dec. 17, 2010) and 75 Fed Reg. 76573 (Dec. 8, 2010).

1                   **V. General testimony on related LTPP RFO process**

2   **A.    Project Location**

3           CARE encourages the Commission to consider that any RFO submitted  
4 pursuant to Commission authorization should identify the load area where the  
5 generation is desired. The LTPP should coordinate with CAL-ISO and the CEC  
6 and determine where local resource adequacy is needed. The LTPP should  
7 consider the location of where resources are needed to back up intermittent  
8 renewables. PG&E’s last RFO requested approval of 1,512 MW all located within  
9 the Bay Area Load Center. All of the projects claim to support intermittent  
10 renewables but there is not even close to 1,512 MW of renewable resources that  
11 are operating or proposed in the Bay Area Load Center. This results in over  
12 procurement in one load center and resultant idle capacity and line loss.

13   **B.    Project Selection**

14           CARE recommends that the Commission not allow the utilities to select the  
15 projects from the LTRFO. This leads to distorted results and behavior which is  
16 not consistent with the Commissions directives and policies. For example in the  
17 proposed decision in A. 09-09-021 states:

18           *We therefore, conclude that PG&E’s criteria weighing was not*  
19           *balanced so as to reflect the priorities we established in D.07-12-*  
20           *052. In light of the conclusions above, we find that while PG&E*  
21           *properly solicited offers and generally acted in a manner consistent*  
22           *with our guidelines and expectations for the LTRFO process, at key*  
23           *junctions PG&E appears to have acted to give its interests*  
24           *disproportionate weight and exercise unilateral control over the*  
25           *selection process.*<sup>14</sup>

---

<sup>14</sup> A. 09-09-021 Proposed decision of ALJ Farrar Page 20

1           The utilities have too many opportunities and too many financial incentives  
2 to properly select the projects in the RFO. This is particularly true when utility  
3 owned generation is being proposed. The selection process needs to be far more  
4 transparent. Having hidden evaluation criteria defeats the open and honest  
5 competition and decision making that is needed to protect the ratepayer's interest.

6       **C. Operational Flexibility**

7           In D. 07-12-052 the Commission recommended that the utilities acquire  
8 fast ramping flexible resources to support intermittent renewables. In this  
9 proceeding CARE recommends the Commission provide a solid definition of the  
10 operational characteristics that actually support intermittent renewables. Projects  
11 with 4 hour start times and projects with a limited number of starts per year  
12 provide questionable support for intermittent renewables. PG&E's 2008 All  
13 Source Long –Term Request for Offers requested:

14           *Resources that are capable of being committed to production a high*  
15           *number of times per year and those capable of multiple starts and stops per*  
16           *day are preferred. For example, flexible resources should be capable of*  
17           *being "cycled" on and off at least 300 times per year.*

18  
19           *PG&E prefers resources that have a relatively short startup time to full*  
20           *operation. For example, PG&E prefers resources that have start times of*  
21           *30 minutes or less, or, in the case of resources offering daily cycling, start*  
22           *times of 60 minutes or less. Resources with longer start up times to full*  
23           *load, such as 4 hours or more, are less valuable.<sup>15</sup>*

24  
25           While the attributes that PG&E requests in its 2008 LTRFO would provide  
26 backup to intermittent renewables the offers PG&E selected did not meet these

---

<sup>15</sup> PG&E 2008 LTRFO Page 5  
[http://www.pge.com/includes/docs/word\\_xls/b2b/wholesaleelectricssuppliersolicitation/LTRFO040108.doc](http://www.pge.com/includes/docs/word_xls/b2b/wholesaleelectricssuppliersolicitation/LTRFO040108.doc)

1 criteria. For example the Marsh Landing Project only provides for 167 starts per  
2 year.<sup>16</sup> All of the projects had start limits which allowed the projects to start less  
3 than once a day. These types of operational limitations do not provided the  
4 flexibility needed for intermittent renewable resources which could ramp up and  
5 down several times a day. Some of the projects had start times up to 4 hours.  
6 The Commission needs to better define the operating characteristics of the projects  
7 to eliminate projects which do not meet the Commissions Policies and goals.

8 **D. PPA v. PSA**

9 The Commission has already recognized that there are substantial  
10 difficulties when comparing utility owned generation to merchant owned  
11 generation. These problems are exacerbated when the utilities themselves  
12 evaluate and select the projects. There is a large incentive for the utilities to select  
13 their own projects over superior projects proposed by merchant generators. Using  
14 vague or confidential protocols damages the process and discourages merchant  
15 generators from participating.

16 To level the playing field the Utility owned generation must not be allowed  
17 to come back to the Commission after it has submitted its bid and raise the price of  
18 the offer after the selection process has concluded. This allows an unfair  
19 comparison of bids and can result in the best offers not being selected.

20 **E. Asset Concentration**

21 The Commissions should discourage the location of multiple facilities in a  
22 small geographic area. In the last RFO PG&E's winning bids included 1,305 MW  
23 of generation out of a possible 1,512 MW within one mile of each other in Contra  
24 Costa. This occurred even though PG&E had just begun operation of the Gateway  
25 Project which is next to the Marsh Landing Project. This makes it difficult to site
