RE: Comments on Proposed Rulemaking titled “Position Limits for Derivatives” (RIN 3038-AD99) and “Aggregation of Positions” (RIN 3038-AD82)

Dear Ms. Jurgens:

The National Cattlemen’s Beef Association (NCBA) appreciates the opportunity to comment on the Commodity Futures Trading Commission’s (CFTC or Commission) proposed rules “Position Limits for Derivatives” (RIN 3038-AD99) and “Aggregation of Positions” (RIN 3038-AD99). As the oldest and largest national trade association for America’s beef industry, NCBA represents all segments of the cattle and beef industry; an industry that contributes approximately \$44 billion to the nation’s economy.

NCBA members require viable risk management tools in order to navigate the price fluctuations and other risks within production agriculture. NCBA fears the above mentioned proposed rule(s) would have a negative effect on a producer’s ability to utilize the available risk management tools within commodities contracts. NCBA supports viable futures exchange to facilitate effective risk management opportunities for the livestock industry, and contract specifications that match industry needs and facilitate convergence of futures prices with the respective cash market.

NCBA is opposed to the proposed rule changes in the “All Months Combined Limits.” The imposition of all months combined limits in continuously produced, non-storable commodities such as livestock will reduce the liquidity needed by hedgers in deferred months who often manage their risk using multiple contract months. The current exchange limits for livestock contracts that specify single month limits enable speculators to provide liquidity to hedgers and have worked well.

NCBA requests that four factors be further considered when imposing speculative position limits. Those are:

- (i) to diminish, eliminate, or prevent excessive speculation as described under this section,
- (ii) to deter and prevent market manipulation, squeezes, and corners,
- (iii) to ensure sufficient market liquidity for bona fide hedgers, and
- (iv) to ensure that the price discovery function of the underlying market is not disrupted.¹

Therefore, before imposing any federal position limit, the Commission should present extensive analysis to demonstrate that these four factors have been balanced. The proposed rule does not contain such an analysis. Moreover, the Commodity Exchange Act (CEA) requires the Commission, in setting federal position limits, to also promote “sound risk management” and “ensure that trading

¹ CEA Section 4a(a)(3)(B)

on foreign boards of trade in the same commodity will be subject to comparable limits and that any limits to be imposed by the Commission will not cause price discovery in the commodity to shift to trading on the foreign boards of trade.”² NCBA does not feel such analysis appears in the proposed rule.

NCBA is also opposed to the proposal’s current definition of “bona fide hedging.” The Position Limits for Derivatives proposed rule’s exclusion of hedge transactions that meet Congress’ definition of a bona fide hedge, but which the proposal has chosen to reject, is not only contrary to Congressional intent but also makes it more difficult for commercial end-users to hedge legitimate price risks arising from the normal course of business operations. The new, restricted definition of bona fide hedging hits hedgers who use physical-delivery futures to hedge their risk particularly hard. In addition, the Position Limits for Derivatives proposed rule is interpreting the statutory “economically appropriate” requirement for a bona fide hedge in a way that doesn’t seem to conform to commercial market practices such as portfolio risk management, which has been recognized by the Commission since 1977.

NCBA requests the Commission to define “bona fide hedging transaction,” specifically to include three definitional statements in reference to a bona fide hedge position. We believe a bona fide hedge:

- (i) represents a substitute for transactions made, or to be made; or positions taken, or to be taken at a later time, in a physical marketing channel,
- (ii) is economically appropriate to the reduction of risks in the conduct and management of a commercial enterprise, and
- (iii) arises from the potential change in the value of—
 - (I) assets that a person owns, produces, manufactures, processes, or merchandises; or anticipates owning, producing, manufacturing, processing, or merchandising,
 - (II) liabilities that a person owns or anticipates incurring, or
 - (III) services that a person provides, purchases, or anticipates providing or purchasing.³

NCBA encourages the Commission to recognize the ability of producers to participate in anticipatory hedging and follow the context of other rules. An example being the Volcker Rule, where the Commission allows a trading desk to “establish an anticipatory hedge position before it becomes exposed to a risk that it is highly likely to become exposed to, provided there is a sound risk management rationale for establishing such an anticipatory hedging position . . . The amount of time that an anticipatory hedge may precede the establishment of the position to be hedged will depend on market factors, such as the liquidity of the hedging position.”⁴

NCBA believes that cross-hedging is very important for commodities that are transformed into products that may not be traded commodities. The Commission’s proposal requires a 0.8 correlation coefficient to qualify a contract for utilization as a cross-hedge. NCBA strongly objects to the usage of a 0.8 correlation coefficient to qualify a contract for utilization as a cross hedge. Examples can be found in which a cross-hedge of two contracts with the same underlying commodity would not

² CEA Section 4a(a)(2)(C)

³ CEA Section 4a(c)(2)

⁴ Prohibitions and Restrictions on Proprietary Trading and Certain Interests in, and Relationships With, Hedge Funds and Private Equity Funds, Final Rule, p. 297 of draft text.

achieve a 0.8 correlation, such as corn or natural gas contracts delivered in two different locations. Additionally, end-users may need to utilize cross-hedging in cases where seasonality impacts the correlation between the two commodities, or in cases which go out past three years. NCBA members believe that a position limits regime where risk managers can freely select their cross-hedges, report them as such, and stand ready to explain them to the Commission, if necessary, is the proper regulatory design.

NCBA would also like to remind the Commission of the success of several contracts where the CME Group has set speculative limits and monitored them relative to deliverable supply within the given market. This approach to speculative limits has served the industry well and allowed the CME Group the authority to draw down the speculative limits to appropriate levels. NCBA would support such a rule that would allow the CME Group and other exchanges to continue in such manner.

NCBA would like for the Commission to provide further clarification on two aspects of the proposed rule: 1) What is the definition used for control of speculative accounts? 2) What are the aggregation rules and how do they pertain to customers of commodity producing firms?

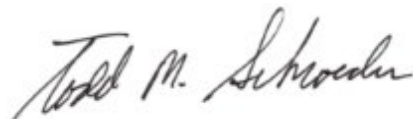

NCBA recognizes the effort and thought the Commission and its staff have put into the drafting of the proposed rule. NCBA acknowledges the Commission's crucial oversight that fosters transparent, open, competitive, and financially sound commodity markets. Prior to adopting a final rule for federal position limits, NCBA urges the Commission to be mindful of its role in protecting the longstanding and crucial ability of commercial end-users to utilize commodity markets to manage risk.

NCBA appreciates the Commission's consideration of our comments on a vital aspect of the industry and the effects such changes will surely have on the industry.

Sincerely,

Bob McCan
President
National Cattlemen's Beef Association

Todd Schroeder
Chairman
NCBA Cattle Marketing and
International Trade Committee
