

# How to earn Money using your WhatsApp?

Before Staring I want to first introduce this amazing app that most probably you have in your phone but still I believe each article should start with introduction.

So WhatsApp is a messenger app that is used by few billions(Yes, few billions!!).

What if I tell you the same app you use to forward memes and jokes can be used to earn daily income? Will you believe me? You will most probably believe me at the end of the article(or maybe start believing that it is possible).

## 1) Sell Your Own Products

Do you already have products or services? If answer is yes, then that's great. All you have to do is Create WhatsApp Group with your brand logo and a short and simple description about your product or service. Now you have to create a shareable link. Copy that link. Now next step is to get members who are interested in the product or service that you have offer. you can use your contacts but if you not able to get many members to sustain then I would recommend using website that index WhatsApp group links one such website is [Linkbazaar](#). All you have to submit your group link in submit group section. You can also share your link on social media website to get more members. Some people I know personally have 100s of WhatsApp Groups and earn in thousands.

## 2) Affiliate Marketing

In affiliate Marketing you have to sell other people products so you don't need to have products of your own. One good example of Affiliate marketing is [Amazon Affiliate Marketing](#).

## 3) Promoting Apps

Some apps offer cash, offers and coupons if you share their apps with your contacts and they download it.

## 4) Using PPD networks

Basically, as per PPD (Pay Per Download) network norms, you will be paid if users download your uploaded files. For example, you can go for [openload.com](http://openload.com) among other PPD websites.

Thanks!!!
