Box Studies Start on Party Interest to Public Representation [Without Divisorials]. Divisorials to Party Interest over Corporative Influence are Auditable under Public Investment. The Corporation defaults to Interests Auditable printing checks for the [Private|Public|Person]

The Joblessness Homelessness Cycle is the end of Economic Poverty to which the attention of Social Services in progress of the State, Nation and Individual require dedicated care over which employment availability is the limiting variable related to Civil Right violations in workplaces discriminating persons on subjective bias for which arbitrary processes are not remediative of joblessness or homelessness. Housing availability without jobs creates an opportunity for the exploitation of Humans as Resources instead of Humans for Humanity. Political appropriations about funding the homeless and those affected though poverty or an illness or a pandemic equally stated direct to funding considerations of improving the workplace|training|productivity as a unitary variable in the matrix of considerations that are held up to belief over detailed observations of Civil Right violations in the workplace. Cyclical argumentatives of the drivers of homelessness and joblessness prompt politicians to push legislation to divert funding from requisite programs to reduce total joblessness and poverty. The distribution inequity of salary to training | experience | job task | efficiency | job demand | job offer | recruitment processes | technology development | are limiting in the considerations to individuals seeking training | education | competitive salary | competitive benefits. Technological drivers like the Internet or the Stock Market driven by special interests in exploiting human resources are not linear to the benefits workers receive daily or for the efficiency in creating community services of the importance in sustaining the drivers of the economy. Systematic Racism, Visual Discrimination, and the absence of oversight to the workplace environment result in exploitative limits that exploit the homeless for medical purposes for which development training and education are the solutions to progress public health. Funding to specific programs that target the homeless are Civil Rights injunctions that are easily solvable through only one interest, the interest of improving lives to the maximum for which cyclical argumentatives at the State and National Legislatures create the divisorials that limit equity in economical progress. The Internet as a base for economical derivations of instruments without intervention of a human create the basis for the largest violations of Civil Rights at the Present and to the Future. No efficiency advancements in documentation requirements would level the extortion to workers outside of the equity of the workplace environment. Proficiency in competition variable to nominal salaries and information distribution does not distribute the solutions to the Joblessness Homeless Cycle.

Tax Structures Determinant to Contributions over earnings proportional to productivity rations to inequity incentivize cycle exits that are deleterious to production resultant in public | private complaints redundant to representative political discourse over interest without addressing root causes in poverty | education | joblessness | investments in infrastructure to inspections of progress.
